## SPECIAL PRICE LIST OF SEEDS

FOR

### MARKET GARDENERS AND FLORISTS

OFFERED BY

**ALFRED J. BROWN SEED CO.**

COR. OTTAWA AND LOUIS STS.

GRAND RAPIDS, MICHIGAN.

1906

# To Our Friends and Patrons:

The volume of our business now being principally wholesale we have decided to discontinue the printing of a descriptive retail Seed Catalogue. We shall, however, continue our Retail Department, known for more than twenty years as Brown's Seed Store, and which is still under the able management of Mr. John A. Brummeler, who has been with us nearly the entire time of our business career. All those who have favored us with their orders for Seeds in the past will receive the same courteous treatment.

## Quality

Always the best, in fact we grow and handle no other. For more than twenty years our aim has always been to supply the best regardless of the extra cost. Don't throw your money away on poor seeds—buy the best and be sure you get them.

Alfred J. Brown Seed Co.

A Corner in our General Offices.

View of Part of the Main Floor.

## Artichoke

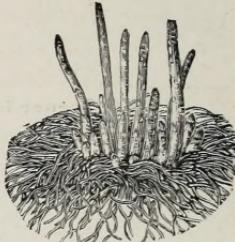

**Large Globe.** The best for general use. Buds large, almost round; scales pale green, shading to violet at the base; thick and fleshy.

Price per lb. \$2.50.

**NEW CUCUMBER—THE DAVIS PERFECT.**

Originated by Eugene Davis and a Sure Money Maker for those engaged in growing cucumbers under glass as well as for truck gardeners to grow out-of-doors.

**DESCRIPTION.**

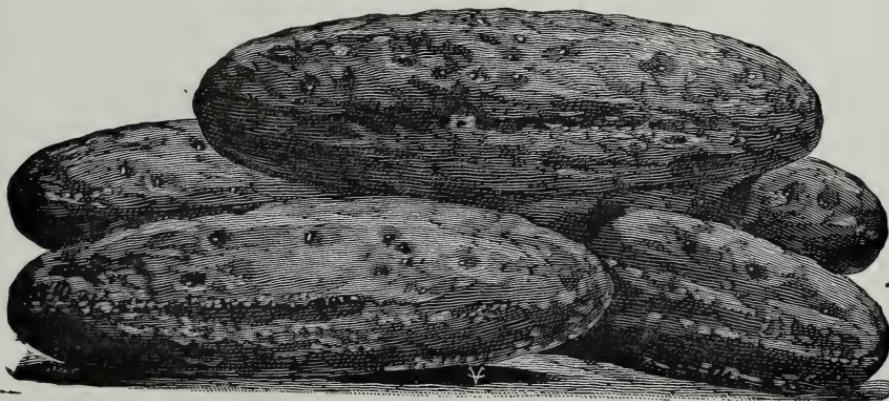

Shape slim and symmetrical with an average length of ten to twelve inches. Color, dark glossy green. They never grow pussy and hold their color and brittleness long after being cut. The seeds are very soft when the cucumber is fit for the table. Quality unequalled and enormously productive whether grown under glass or out-doors. A sure money maker for those engaged in cucumber growing and unquestionably the best for the home garden.

Price per pkt., 20c. 3 for 50c.

## MUSHROOMS.

Mushrooms can be grown in any dark room or cellar, where the temperature can be maintained at 50° to 60°. From old pastures procure the soil and store it away. To one bushel of this soil add two bushels of fresh horse manure. Of this well-mixed compound prepare a bed, say four feet wide. Put down a thin layer and pound it down hard, and go on until you have a bed eight inches thick. It will soon become pretty hot, but let the heat recede until it is only 85° or 90°. Then make holes, say a foot apart, and put in the spawn, two or three pieces as large as a walnut in each hole. Cover the holes and press the soil solid and smooth. Let the bed remain in this condition about twelve days; then cover it with two inches of fresh loam, and over this place four or five inches of hay or straw, and the work is done. If the temperature is right, in six or eight weeks you may expect Mushrooms. The bed will continue bearing from twenty to thirty days. After the first crop is gathered, spread over the bed an inch of fresh soil, moisten with warm water, and cover with hay as before. Success is not always certain with the amateur, and it is usually to be attained only after more or less experience. One pound of spawn is enough for a bed 3 x 6 feet.
